General Student Satisfaction
Fall 2018

Overview
The General Student Survey (GSS) was designed to gather student perceptions related to several components of the educational experience at the University of South Alabama. The GSS was conducted electronically via the Class Climate survey system. The GSS included Likert scale, multiple choice, and open-ended questions. Survey collection occurred from mid-November to early December. Reminder e-mails were sent to invited participants every five days until the close of the survey. Participation was voluntary, and no incentives were provided to students for their participation.

Sampling Method
Stratified random sampling was utilized to select the sample from the institutional census database. Stratification was based on (1) gender, and (2) race. Race was either coded as white or students of color in the sampling process. Each strata was sampled based upon percentage represented within the census population. Under-represented strata were oversampled.

Sample
The final sample consisted of 4,450 students. 1,236 participants responded to the survey for a final response rate of 28.0%. The respondent demographics are displayed in the following tables (n = number of respondents).

Analysis and Charts

The components of educational experiences assessed by the General Student Survey are presented in the following tables in Sections 2-5. Section 6 provides comparisons of the present data with the General Student Survey data from Fall 2014, Fall 2015, and Fall 2016. The tables provide response percentages. Additionally, the tables provide the written question and number of respondents for each specific question (represented by *n*).
